ABSTRACT OF THE DISCLOSURE

1

- A filtering device for a portable beverage bottle has a cap with a
- 3 suction tube adapted to detachably mount on an opening of the beverage
- bottle, and at least one filter element detachably secured below the cap. The
- 5 at least one filter element is accommodated inside the portable beverage to
- 6 purify water conveniently. Additionally, a movable hat is attached on the
- 7 suction tube to selectively close or open the filtering device.
